People use the term dolphin, porpoise and whale to describe marine mammals belonging to the order Cetacean (from the Greek work ketos, "large sea creature"), and often use them incorrectly. Whales, orcas, dolphins, and porpoises are considered to be some of the ocean's most majestic creatures. Some are monstrous and fearsome when provoked, and all of them majestically beautiful. Porpoises are members of the scientific order Cetacea and are related to dolphins, but the two animals are different species. They both have sleek bodies and large flippers. Both are considered ... Whales, Dolphins, and Porpoises was the original book by Mark Carwardine (with consultants Dr. Peter Evans and Mason Weinrich) with the beautifully detailed illustrations of Martin Camm. Practically every species of cetacean is profiled in this book and packed in helpful information for every...
