Forensic gait analysis is the analysis, comparison and evaluation of features of gait to assist the investigation of crime. Gait was first used as evidence in 1839 in London, England, when Thomas Jackson, who had a bowed left leg and walked with a limp, was identified by a witness, George Cheney. Gait is the pattern of movement of the limbs of animals, including humans, during locomotion over a solid substrate. Most animals use a variety of gaits, selecting gait based on speed, terrain, the need to maneuver, and energetic efficiency.
