

Download Integrated Approaches To Water Pollution Problems

The 2019 meeting promises to be a dynamic and informative event and going to explore the issues, innovations and integrated approaches towards water pollution and waste water management, the speakers are a multidisciplinary gathering of globally perceived specialists that speak on Water Sustainability: Case Studies & Practical Applications. Integrated Water Resources Management (IWRM). Water is a key driver of economic and social development while it also has a basic function in maintaining the integrity of the natural environment. Contamination of air, water, or soil by substances that are harmful to living organisms. Pollution can occur naturally, for example through volcanic eruptions, or as the result of human activities, such as the spilling of oil or disposal of industrial waste. Water pollution is exceeding the limit in most of the water sources, and has become a great threat to the survival of aquatic species. An analysis on news of the year 2011 that published in 'The Daily Star,' relevant to water pollution, including pollution of both the marine and freshwater especially water of the river, is highlighted in ...
